RE: Pratt & Whitney Part B Application Extension - Letter of 10/25/84

Dear Mr. Dews:

In fulfilling Condition 2 of your October 25, 1984 letter, we are presenting a brief description and schedule of events for our hazardous waste incinerator.

As you are aware, Recon Systems, Inc., has been retained to evaluate the incinerator problems. They will be on-site performing a detailed internal investigation into the condition, design, and operational parameters during mid-January. A report summarizing their findings and giving recommendations for modification will be forthcoming at the end of January.

Following time allotted for any necessary modifications, a pilot test burn using an "add-on" scrubber system for controlling particulate emissions is scheduled to occur by April 1. While this is being conducted primarily to test particulate removal, it will also be able to provide a rough idea of the destruction efficiency.

The final project report, with recommendations, is scheduled for the end of April. This report will detail the final proposed design of the incinerator systems. Only with this report can a formal trial burn be successfully scheduled and completed. As stated in our permit application, no trial burn will be scheduled before a test protocol has been submitted and a pretest conference held. We will schedule this conference as soon as it is appropriate.

If you desire further information on this matter, contact Kevin P. Vidmar at 565-2016.

Very truly yours,

J. D. Wickwire
Manager, Plant Engineering
